Error 088 - Arc Fault on PV Side (Via LCD Panel)

Disclaimer

The material in this document has been prepared by Sungrow Australia Group Pty. Ltd. ABN 76 168 258 679 and is intended as a guideline to assist solar installers for troubleshooting. It is not a statement or advice on any of the Electrical or Solar Industry standards or guidelines. Please observe all OH&S regulations when working on Sungrow equipment.

Arc Faults are usually a result of loose wiring / terminal or even damaged cables. Hence, to protect against such faults, Sungrow introduces a new feature on inverters.

The new Crystal G2 Premium Inverters come with the new in-built feature i.e. AFCI (Arc Fault Current Interrupter) function. This function allows the inverter to detect Arc Faults on the PV side (088 Fault) and stop the inverter from producing to prevent its consequences.

Clear the Arc Fault from inverter side

The error 088 could be cleared either from inverter side or by Local Access. Click the Enter and find the Settings on the inverter, which could be shown as Figure 1.

Figure 1 Settings

After that, put the password as 111 and scroll down to find the Arc detection, which can be shown as Figure 2 and Figure 3.
